

6.s058 Research Report Guidelines	
Abstract	• What is the problem motivating the project? • What is the project and what are the key techniques and methods you are using? • What are your results? • What are the contributions to CV and solving the problem you have identified?
Introduction	• What is the problem? Are you describing it clearly? • Why is the problem important (if you solved it, who would care)? • What is your goal? What are you going to check, test, validate, analyze, and/or improve?
Related Work	• How have people tackled this problem before? • How is your method different? • What ideas from prior work does it combine and/or build upon?
Methodology	• What are you trying to show or investigate? • How does your methodology address the problem as laid out in the introduction? • What are your performance metrics? How are they defined? • Does the project go beyond re-implementing an existing method and add something that has not been done before? (Could be a new analysis of the model, a change to the model, or a new application). ◦ If you re-implement something, do you discuss where you follow <i>and</i> diverge from the paper? Do you discuss the design decisions with reference to follow-on work? • Figures: ◦ Do you include a figure that illustrates the problem and/or your method? ◦ Do you have a related caption that describes the problem and/or the method? • IF IN A TEAM: Do you include a paragraph that describes the individual contributions of each group member?

Results and Discussion	• What experiments did you run (datasets, hyperparameters of model, how long you trained it for, baselines, etc.)? • Are your results reproducible? (Please make your code base available). • Do the experiments align with what was described in the Methods section?
Ablations / Analysis	• Do you perform ablation studies or controlled comparisons? • Do you isolate key variables? • Does this analysis explain why your results look the way they do?
Ethical / Societal Considerations	• Do you consider biases, misuse, and broader impacts?
Failure Cases / Limitations	• Do you analyze failure cases? • Do you discuss when/why your method breaks?
References and Conclusion	• Does your conclusion reiterate the main contribution of your project? • Do you connect your project's contribution back to your initial motivation? • Do you cite relevant papers?
Style	• Is the paper clear and easy to understand? • Can the work be reproduced from the information given in the report?
Formatting	• Length should be 5000 words if working with a partner, 3500 words if working individually (not including contributions statement or references). • Should be easy to load and read. • Use a CVPR citation style.
